

## Non Muscle Invasive Bladder Cancer (NMIBC) Initial Treatment Plan

These are the possible treatment options for Non Muscle Invasive Bladder Cancer (NMIBC). You are not necessarily going to have all of these treatments, nor does this list represent a treatment pathway. Your Keyworker will explain which treatments you will be having and why.

- Smoking cessation and/or healthy behaviours
- Immediate post-operative Mitomycin C (MMC)
- Surveillance cystoscopy after 3 months
- 6 week course MMC
- Induction BCG
- Maintenance BCG
- Early repeat TURBT
- Laparoscopic/ Robotic/Open cystectomy
  - stoma/continent diversion/neo-bladder

Your Keyworker will explain each of the treatment options which are appropriate for you and provide written information regarding these options including written guidance comparing the different forms of treatment, your treatment pathway and care plan.
